## PERSONAL PROJECTS

### Blockchain Prototype

- Simple Blockchain prototype it is written in python and it helped me to understand how blockchain works behind the scene.

### Crowd Funding

- This project is a solidity smart contract for a Crowdfunding, where contributors can contribute money, create proposals and vote for proposals. The contract has functions to contribute, get the contract balance, get a refund, create proposals, vote for proposals, and make payments (only accessible by the manager).

### Event Organization

- This smart contract for event organization is written in solidity it leverages blockchain technology to helps us securely and efficiently manage event details such as ticket sales and payments. It eliminates the need for intermediaries and ensures the terms of the agreement are unalterable. In short, it makes event planning smoother and more secure.
